- **Simple Interest Formula :**
- The formula for simple interest helps you find the interest amount if the principal amount, rate of interest and time periods are given.
- Simple interest formula is given as:
- **$SI = PTR/100$**
- Where SI = simple interest
- P = principal
- R = interest rate (in percentage)
- T = time duration (in years)

- **Amount (A) = Principal (P) + Interest (I)**
- Where,
- **Amount** (A) is the total money paid back at the end of the time period for which it was borrowed.
- The total amount formula in case of simple interest can also be written as:
- **$A = P(1 + RT)$**
- Here,
- A = Total amount after the given time period
- P = Principal amount or the initial loan amount
- R = Rate of interest (per annum)
- T = Time (in years)
